

## Carriage Rollers

Carriage Rollers - Particularly designed bearings called carriage rollers are frequently found on lift masts since they enable them to operate better within difficult environmental surroundings. The standard lift mast is regularly subject to frequent shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences such as heat, dust, cold, moisture, contamination and aggressive ambient air. Therefore, the guidance arrangements of lift masts must be specifically tough and have a specific high load carrying capacity.

Carriage rollers have been created as the answer for functioning in various environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts should be economical and maintain operational security while having the ability to handle a specifically high load carrying capacity.
